

PureView® Window Screen

Focus on the outside view, instead of the screen.

Improve your view with PureView® window screens.

BETTER VIEWS

Milgard's innovative PureView window screen raises the bar in fresh air screens. With smaller yarns, the strands of the screen block less of your vision, so your view out the window is clearer. It's a better, purer view. The smaller yarns increase light transmittance, allowing more natural light to fill the room. The finer mesh also reduces the appearance of the screen, which enhances the curb appeal of the home.

IMPROVED PERFORMANCE

Improved fresh airflow provides more comfort. The individual yarns and opening between the yarns are smaller than conventional fiberglass screens. This results in added protection against very small insects and particles. The fiberglass material provides excellent durability in all climates, but is ideal in coastal regions. The fiberglass mesh will resist corrosion and breakdown.

FEATURES

- Smaller aperture of opening provides better particle protection
- Mesh design utilizes smaller yarn to improve curb appeal
- Greater openness (74% versus standard screen at 59%) allows:
 - More light to enter your home
 - Greater airflow for better ventilation
 - Increased optical clarity for clearer views

UPGRADE AVAILABLE ON

- Montecito™ Series vinyl windows
- Tuscany™ Series vinyl windows
- Ultra™ Series fiberglass windows and patio doors
- WoodClad™ Series fiberglass windows and patio doors
- Classic™ Series vinyl patio doors
